Sequence 122098, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
FILE REPRENCE: CLOOL307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR FILING DATE: 2000-10-20

PRIOR PILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-10-03

The present sequence is that of cDNA encoding a recombinant human brain lysophospholipid-specific lysophospholipase (LysoPLA, see AAB82669).

C thuman LysoPLA is a novel member of the K/L hydrolase family having a catalytic site composed of Ser-119, ABp-174 and His-208. LysoPLAs are catalytic site composed of Ser-119, ABp-174 and His-208. LysoPLAs are critical enzymes that act on biological membranes to regulate the critical enzymes that act on biological membranes to regulate the critical enzymes that act on biological membranes to regulate the critical enzymes that act on biological membranes to regulate the critical mother all tissues, although levels vary. The LysoPLA was considered by PCR amplification of human brain cDNA waing primers (see AAH26337-38) based on human sequences identified by screening with a cmouse LysoPLA sequence. The PCR product was expressed in Bscherichia coli wose LysoPLA sequence. The PCR product was expressed in Bscherichia coli which included an N-terminal 6His tag and thrombin cleavage site, was crecovered on an Ni-WTA column. Kinetic analysis showed that human LysoPLA displays apparent co-operativity and surface dilution kinetics. The crecombinant LysoPLA and be used in the treatment of disease states having cleavated concentrations of lysophospholipids, such as atherosclerosis, hyperlipidaemia, lethal dysrhythmia in myocardial ischaemia and segmental companies. The hyperlipidaemia, lethal dysrhythmia in myocardial ischaemia and segmental compane-deficient patient by infusion or by gene therapy (both claimed).

Also claimed is a method of inhibiting human brain LysoLPA activity using company arachidonyl fluorophosphates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             108

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ACCGCTGCGGTGATTTTCCTGCATGGATTGGGAGATACTGGGCACGGATGGGCAGGAAGGCC 125
                                                                               The present invention relates to a method (M1) for determining the subtype of leukaemia cells and whether a patient sample contains leukaemia cells. The method comprises determining the expression profile of a group of markers in a patient sample. The method is useful for determining the presence of leukaemia cells, its types or subtypes, and for the preparation of a medicament for treating leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              65
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Determining the subtype of leukemia cells and whether a patient sample contains leukemia cells or other cells, useful for treating leukemia, comprises determining the expression profile of a group of markers in a patient sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ξ

The present sequence encodes human lysophospholipase (NHLP). The present invention also describes a method for treating or preventing a disorder of call proliferation (e.g. arteriosclerosis, atherosclerosis, bursitis, cirrhosis, hepatitis, mixed connective tissue disease, myelofibrosis, parcxysmal nocturnal haemoslobinuria, polycythaemia vera, psoriasis, primary thrombocytopenia, and cancers), inflammation (e.g. Addison's disease, AlDS, allergies, asthma, atherosclerosis, bronchitis) and a clasorder of the immune response (e.g. ADDS, allergies, ankylosing spondylitis, autoimmune haemolytic anaemia) by administering an antegonist to NHLP, NHLP proteins, antegonists, antibodies, anotheris, autoimmune proteins, antegonists, antibodies, and prodeins, attendentary sequences or vectors may be administered in combination with other therapeutic agents. Antibodies which specifically bind to NHLP can be appeared by a complementary sequences of disorders characterized by expression of agonists. The polymucleotides (PNS) encoding NHLP or fragments may be used therapeutically. In one aspect, the complement of the representation of the manna Complement of the respective of the manna Complement of the complement of

Complementary molecules may be used to modulate NHLP activity or to achieve regulation of gene activity. Dispuspedically, the PNS may be used to detect and quantitate gene expression in biopsied tissues in which expression of NHLP may be correlated with disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

The present invention describes isolated human NOVX proteins, where X is 1 to 42. ACC6226 to ACC62245 encode the human NOVX proteins given in ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, complete to the dermatological, anorectic, immunosuppressive, cytostatic, antidiabetic, antidiabetic, antidiabetic, antilifermulity, haemostatic, antidiamatory, anti-HIV, antidiabetic, metabolic, immunomodulator, neuroprotective, nootropic, antidathmatic, metabolic, immunomodulator, neuroprotective, nootropic, antidathmatic, metabolic, immunomodulator, neuroprotective, nootropic, cardiappy. NoVX proteins and antilipaemic activities, and can be used in gene therapy. NoVX proteins in humans and for treating a syndrome cassociated with the human disease. NoVX nucleic acids, proteins and associated with the human disease. NoVX nucleic acids, proteins and attached with the human disease. NoVX nucleic acids, proteins and according a syndrome congenital adrenal hypertension, congenital heart defects, acrtic stenosis, valve disease, tuberous sclerosis, scleroderma, obesity, transplantation, chypertension, prostate cancer, dispetes, metabolic congenital adrenal hyperplasia, prostate cancer, dispetes, metabolic congenital adrenal hyperplasia, prostate cancer, dispetes, metabolic congenital asthma, Crohn's disease, multiple sclerosis, infectious disease, anorexia, cancer-associated cachexia, cancer, cancer, disease, parkinson's disease, immune disorders, haemophilia, cancer, decetive disease, parkinson's disease, immune disorders, haematopoietic disorders, dyslipidaemias, and metabolic sydrome X. Acc62245 to Acc62465 represent PCR primers and probes for human NOVX sequences, which are used in example from the present invention.

C haematopoietic a human trypsinogen protein given in comparison with the human NOV35b protein in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                136 ACCGCTGCGGTGATTTTCCTGCATGGATTTGGGAGATACTGGGCACGGATGGGCAGAAGCC 195

                                                                                                                                                                                                                                                                   psychoactive compound. A compound of the invention has antidepressant, neuroleptic, and analgesic activity, and acts as a opioid modulator, a psychosedative. The method is useful for identifying a psychoactive compound or identifying drug efficacy of a psychoactive compound for treating psychiatric disorders of depression, schizophrenia and pain. present sequence represents a human psychoactive-associated gene, I (BYPLAI).

The present invention describes an isolated tumour-associated antigenic target (TAT) nucleic acid comprising: (a) any of 4622 nuclectide sequences (see SEQ ID No:1 to 4622); (b) the full-length coding region of (a); (c) the complement of (a) or (b); (d) a sequence that has 80% sequence identity to (a)-(c); or (e) a sequence that hybridises to (a)-(c). Also described: (1) an expression vector comprising the above expression vector a process for producing a polypeptide; (4) an isolated polypeptide comprising the above expression vector; (3) a process for producing a polypeptide; (4) an isolated polypeptide nucleotide sequences; (b) an amino acid sequence encoded by the full-length coding region of the above nucleotide sequences; or (c) a sequence having at least 80% identical to (a) or (b); (5) a chimeric polypeptide; on isolated antibody that binds to the above polypeptide; (7) a process
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 human; tumour-associated antigenic target; TAT; cytostatic; gene therapy; cancer; cell proliferative disorder; gene; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an antisense compound (I) 8-30 nucleobases in length targeted to a nucleic acid molecule encoding lysophospholipase I (II), where (I) specifically hybridises with and inhibite the expression of (II). Is useful for inhibiting the expression of (II) in cells or tissues, and for treating a human having a disease or condition associated with Lysophospholipase I e.g. inflammation, hyperlipidaemia, and cardiovascular disorders such as atherosclerosis and myocardial ischaemia. (I) is useful as research reagent and diagnostics. (I) is also useful for distinguishing functions of various members of a biological pathway. (I) is useful in antisense gene therapy. the above polypeptide; (9) a tumour-associated antigenic target (TAT)

binding organic molecule that binds to the above polypeptide; (10) a

composition of matter comprising the above polypeptide; (10) a

composition of matter comprising the above polypeptide; (10) a

composition of matter comprising the above (chimeric) polypeptide;

with a carrier; (11) an article of manufacture comprising a container and

contained a carrier; (11) an article of manufacture comprising a container and

the composition of matter contained within the container; (12) methods of

inhibiting the growth of a cell that expresses the above protein, where

contained the call is at least in part dependent upon a growth

containing effect of the above protein; (13) a method of the above protein in a mample suspected of containing the presence of a protein in a sample suspected of containing the protein of described above; (15) methods of diagnosing the presence of a tumour in a mammal; (16) a method for treating or preventing a cell proliferative disordated with increased expression or activity of the above corganic molecule to a cell that expresses the protein described above.

Conganic molecule to a cell that expresses the protein described above.

Conganic molecule to a cell that expresses the protein described above.

Conganic molecule to a cell that expresses the protein described of preventing or treating cancer. The composition is also used for preparing containing the protein described to the above containing the preventing or treating cancer. The composition is also used for preparing a method of a medicament for the therapeutic treatment or diagnostic detection of a medicament for the therapeutic treatment or diagnostic detection of a medicament for the therapeutic treatment or diagnostic detection of a medicament for the therapeutic treatment or diagnostic detection of a medicament for diagnostic detection of a medicament for diagnostic detection of a medicament for a diagnostic detection of a medicament for diagnostic detecti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

associated with ovarian and endometrial cancers. The polymucleotides and the proteins they encode may be used in the prevention, diagnosis and the proteins they encode may be used in the prevention, diagnosis and treatment of diseases associated with the inappropriate expression of covarian and endometrial cancer polypeptides (OGCPS). For example, the comparison and endometrial cancer polypeptides (OGCPS). For example, the capression by rectifying mutations or deletions in a patient's genome contrast affect the activity of ORCPS by expressing inactive proteins or to supplement the patients own production of them. Additionally, the cution polymucleotide may be used to produce the OBCPS, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. The polymucleotide and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in caped of restorative therapy. The OBCPS may also be used as antigens in the production of anti-OBCPs may also be used as antigons in an arrangiate and arranged and arra
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     detecting the presence of OECP in samples (e.g. by enzyme linked immunosorbant assay (ELISA)) and hence diagnose patients with cancers. The present sequence is a ovarian and endometrial cancer linked cDNA of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          be used to down regulate expression and activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acids encoding 222 polypeptides associated with ovarian and endometrial cancers, useful for diagnosing, preventing and treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The anti-OECP antibodies may also be used as diagnostic agents for
